

FOR PET'S SAKE VETERINARY CENTER – CANINE EXAM FORM

Dr. Kyra Haring

518-745-1177

A physical examination is the most important component of an office visit. Examinations, vaccinations and lab procedures help maintain a healthy life. A physical exam allows the veterinarian to completely examine your pet and discuss any medical problems found or any concerns you may have. All pets should have a comprehensive physical examination annually and twice yearly once senior status (seven years or older) has been reached.

1.) What heartworm and flea/tick preventives are you using?

Last Administered:

Have you seen any fleas or ticks on your dog?

2.) What brand of food do you feed your dog?

How often is your dog fed per day & how much?

3.) Do you provide dental care for your dog?

4.) Do you have other pets?

Are they currently vaccinated and on heartworm/flea/tick preventative?

5.) Does your dog have contact with other pets that are not your own? (Circle) Yes or No

If yes, where? (Circle) Boarding Facility, Grooming Facility, Dog Parks, Obedience/ Training Classes, Play dates with Pets

Heartworm preventive refill

Flea/Tick preventives refill/ how many

Nail Trim

Ear Cleaning Supplies

Microchip/Identification Tag

REVIEW OF VACCINE HISTORY

Last Annual Exam:

Rabies:

A vaccination required by state government. Helps prevent your pet from contracting this deadly neurological disease that can also infect humans

DHPP (Distemper):

A vaccination to protect your dog from distemper, hepatitis, Parvo and Parainfluenza. These diseases are debilitating and can cause death. Nearly every dog will be exposed during its lifetime.

Bordetella:

A vaccination to prevent Tracheobronchitis which is caused by a combination of a virus and bacteria, causing a dry, hacking cough, that can last over six weeks and is highly contagious.

Lyme:

When an animal or person is bitten by a tick that carries bacteria, the bacteria is passed to that person or animal. Lyme disease is the most common tick-borne illness in North America and Europe.

Leptospirosis:

A vaccination to prevent a bacterial infection resulting from contact with urine of infected domesticated animals, wildlife or contaminated food or water. It can cause kidney, liver damage and death. It is also contagious to humans.

Fecal:

The CDC recommends checking a fecal sample every 3-4 months. It is imperative to check a fecal sample the bare minimum once a year. Not all parasites are visible to the naked eye. Contrary to popular belief "indoor only" animals can contract internal parasites.

Deworming:

Fecal test results are not always what they seem. A negative result can be very misleading. The CDC recommends parasite control 3-4 times yearly, including indoor pets. Deworming will be recommended with every annual visit.

H/L/E/A Test Date:

Heartworm disease is a serious and potentially fatal condition caused by parasitic worms living in the arteries of the lungs and in the heart of dogs, cats and other species of mammals. Lyme disease, Ehrlichiosis and Anaplasmosis are tick borne illnesses with a number of signs and symptoms. This test screens your dog for exposure to the tick borne illnesses.
